

Company	ENEXIA	Team	Engineering チーム
Title	(Senior) Platform Engineer (Security / SRE Focus)	Location	Otemachi

About Enexia

At Enexia, we're reimagining how renewable energy is managed and traded to create a sustainable future. As a technology-driven leader in Japan's growing renewable energy sector, we're building a cutting-edge energy platform that aggregates energy from diverse renewable assets, such as solar and wind, to optimize trading within power markets. At the heart of our platform is a sophisticated data infrastructure that turns raw energy data into actionable intelligence.

ENERGY + NEXT + AXIS (軸)AXIA(ギリシア語で価値のあるもの)を組み合わせて作られました。『これからのエネルギー業界の次の軸となる』という意味を込めています。

【業務内容】

Provides tools, services, and infrastructure environments necessary for MLOps practices, data management, and software development, and serves as a foundation to streamline and standardize all activities from production-ready development to operations. Also responsible for designing and managing internal tools.

- Support internal data scientists and engineers to improve productivity and experience, and ensure production readiness.
- Automate and self-service various processes related to development, release, and operation.
- Set necessary SLAs and SLOs across the entire system to improve reliability.

【必須要件】

- Hands-on experience designing and operating cloud infrastructure (preferably GCP)
- Strong experience in infrastructure security (IAM, network security, access controls, etc.)
- Practical experience with container security (Kubernetes / Docker), including vulnerability management, image scanning, and runtime protection
- Understanding and hands-on experience with Zero Trust architecture (design, implementation, or operation)
- Experience with Infrastructure as Code (IaC) (e.g., Terraform) and CI/CD pipelines
- Experience designing systems with production readiness, security, and reliability in mind
- Experience working in team environments using version control tools (e.g., Git)

【歓迎要件】

- Experience in designing and developing 24/7 systems.
- Programming languages (Python, **Go**, Rust)
- IaC tools (**terraform**, terragrunt, pulumi)
- Cloud tools (**GCP Suite** (stackdriver), datadog)
- Git (**GitHub**, Gitlab)
- CI/CD (GitHub Actions, GCP Cloud Build)
- SQL (**SQL**, ORM)
- Containers (**Docker**, Rancher)
- Cloud (**GCP**, AWS, Azure)
- Startup experience
- Agile development experience

This is a role for builders, innovators, and collaborators who want to make a difference. If that sounds like you, we'd love to hear your story. Apply today and let's create a cleaner, tech-driven future—together.
