

DAVID LAYARDI

Platform & Cloud Infrastructure Engineer — Developer Productivity Tooling

Tokyo, Japan | david@layardi.com | github.com/doctor500 | linkedin.com/in/david-lay | medium.com/@davidlayardi

PROFILE SUMMARY

David Layardi is a platform and infrastructure engineer with **8+ years** of experience building and operating scalable cloud systems across government, fintech, and enterprise environments. He has supported production workloads spanning **600+** government applications, **100+** backend services, and **20+** Kubernetes clusters across **GCP** and **AWS**, while delivering infrastructure cost reductions exceeding **90%**, saving over **\$150,000 monthly**, improving migration workflows from **2 hours to 15 minutes**, and reducing cyber incident investigation time from **24 hours to under 2 hours**. At Rakuten, he builds CI/CD platform services and internal automation tooling in **Go** and **Python**, including AI-assisted and agentic workflows that improve compliance and operational analysis.

TECHNICAL SKILLS

Platforms & Cloud: Kubernetes, Docker, AWS, GCP · **Infrastructure & Delivery:** Terraform, Helm, Kustomize, Jenkins, GitLab CI, GitHub Actions, ArgoCD

Languages & Automation: Go, Python, Shell/Bash, Java (Groovy) · **Security & Governance:** Teleport, Cloudflare, secrets/configuration controls, approval-based access workflows

Observability: Datadog, Prometheus, Grafana, NewRelic · **AI & Productivity Tooling:** Claude Code, AI-assisted internal tooling, MCP, agentic workflow design, prompt engineering

PROFESSIONAL EXPERIENCE

Software Engineer - CI/CD Platform, Rakuten, Japan Oct 2025 - Present

Part of Rakuten OneCloud Initiative. Designing, maintaining, and automating large-scale CI/CD infrastructure on Kubernetes to support enterprise-wide development and shared engineering services.

- Designed and maintained **CI/CD-as-a-Service** platform on Kubernetes serving multiple business units, standardizing shared delivery workflows and platform services for internal engineering teams.
- Built backend automation tooling in **Go** and **Python** to modernize platform operations and reduce manual overhead for developer-facing infrastructure services.
- Reduced cyber incident investigation time from **24 hours to under 2 hours** by building internal analysis pipelines for multi-department incident response.
- Developed AI-assisted compliance documentation workflows for CI/CD operations, reducing document creation time by over **80%**.

Infrastructure Engineer, GovTech Procurement, Indonesia Jan 2024 - Sep 2025

Entrusted to maintain the operations of **600+** nation-scale government procurement applications, managing **20+** Kubernetes clusters with **70+** cost-effective worker nodes.

- Led infrastructure refactoring from **GCP Cloud Run** to **GKE**, decreasing production costs by more than **90%** and saving over **\$150,000** monthly.
- Transformed nation-level Mail Services from a monolithic VM into a scalable Kubernetes deployment, increasing service scaling performance by **6x**.
- Implemented audited, approval-based access workflows for over **500** cloud resources using **Teleport**, strengthening platform governance.
- Researched and implemented proof-of-concept platform tooling such as **External Secrets Operator** and **Pomerium on GKE** to improve operational efficiency.

DevOps Engineer, Gojek - GoTo Financial (GTF), Indonesia Nov 2021 - Dec 2023

Maintained **100+** backend services in multi-cloud Kubernetes environments and CI/CD pipelines supporting **24/7** business operations in a fintech environment.

- Decreased **AWS** infrastructure cost for application development by up to **50% hourly** through resource-utilization-driven cost optimization.
- Provided **100%** configuration visibility for backend services through **Vault**-based secret and configuration management.
- Transformed **400+** production **AWS** resources into code-managed infrastructure, improving operational consistency.
- Optimized **GCP Cloud SQL** migration workflows from **2 hours to 15 minutes** using **GCP DMS**.

Release Engineer, Pegipegi, Indonesia Mar 2020 - Oct 2021

Maintained Jenkins pipelines and internal tools on Kubernetes, supporting **100+** backend service pipelines.

- Standardized **80%+** of redundant Jenkins pipeline definitions into a shared deployment model, improving maintainability and workflow reuse.
- Reduced provisioning time for pipeline supporting resources by up to **6x** and decreased backend pipeline initialization build time by up to **85%**.

Data Center Staff, Bina Nusantara - IT Division, Indonesia Mar 2018 - Feb 2020

Built automation tooling for IT operations, reporting, and access workflows, including systems that reduced manual operational processes by up to **10x**.

EDUCATION

Bina Nusantara University, Jakarta 2016 - 2020

Bachelor's degree in Information Systems. Final GPA: **3.8 / 4.0**

ACTIVITIES

Training & Certifications

Associate Cloud Engineer, **Google Cloud** Jan 2023

LANGUAGE

Indonesian - Native · **English** - Business level
