

DAVID LAYARDI

Site Reliability & Cloud Infrastructure Engineer

Tokyo, Japan | david@layardi.com | github.com/doctor500 | linkedin.com/in/david-lay | medium.com/@davidlayardi

PROFILE SUMMARY

David Layardi is a site reliability and cloud infrastructure engineer with **8+ years** of experience operating scalable production systems across government, fintech, and enterprise environments. He has supported workloads spanning **600+** government applications, **100+** backend services, and **20+** Kubernetes clusters across **GCP** and **AWS**.

His recent work centers on reliability, incident analysis, platform automation, and production delivery enablement. He has led infrastructure refactoring from **GCP Cloud Run** to **GKE**, reduced production costs by more than **90%**, saved over **\$150,000 monthly**, and improved migration workflows from **2 hours to 15 minutes**.

TECHNICAL SKILLS

Cloud Platforms: GCP (GKE, Cloud Run, Cloud SQL, Cloud Monitoring, IAM, VPC, Secret Manager), AWS (EC2, ECR, IAM, VPC)

Containers & Orchestration: Docker, Kubernetes, Helm, Kustomize

Infrastructure as Code: Terraform

CI/CD & Release Engineering: Jenkins, GitLab CI, GitHub Actions, ArgoCD

Observability & Monitoring: Datadog, Prometheus, Grafana

Languages & Scripting: Python, Go, Shell/Bash

Networking & Security: Nginx, Teleport, Cloudflare

PROFESSIONAL EXPERIENCE

Software Engineer - CI/CD Platform, Rakuten, Japan

Oct 2025 - Present

Part of Rakuten OneCloud Initiative. Designing, maintaining, and automating large-scale CI/CD infrastructure on Kubernetes to support enterprise-wide development and reliable release operations.

- Reduced cyber incident investigation time from **24 hours to under 2 hours** by building analysis pipelines that supported multi-department incident response and post-incident decision-making.
- Developed internal tooling to auto-generate compliance-ready operation documents, reducing document creation time by over **80%** for CI/CD operations.
- Designed and maintained CI/CD-as-a-Service platform on Kubernetes serving multiple business units, including internal tooling in **Go** and **Python**, supporting release processes with development teams.

Infrastructure Engineer, GovTech Procurement, Indonesia

Jan 2024 - Sep 2025

Government Technology (GovTech) Procurement is part of Telkom Indonesia (IDX: TLKM). Entrusted to maintain the operations of **600+** nation-scale government procurement apps, managing **20+** Kubernetes clusters with **70+** cost-effective worker nodes (spot instances).

- Led infrastructure refactoring from **GCP Cloud Run** to **GKE**, decreasing production costs by more than **90%** daily and saving over **\$150,000** monthly.
- Transformed nation-level Mail Services from a monolithic VM to a scalable Kubernetes deployment, increasing service scaling performance by **6x**.
- Implemented fully audited and approval-based access control for over **500** cloud resources using **Teleport**.

DevOps Engineer, Gojek - GoTo Financial (GTF), Indonesia

Nov 2021 - Dec 2023

Maintained **100+** backend services in multi-cloud Kubernetes clusters, **GitLab CI** pipelines, and runners to fulfill **24/7** business needs.

- Decreased **AWS** infrastructure cost for application development by up to **50% hourly** through resource-utilization-driven cost optimization.
- Provided **100%** configuration visibility to prevent backend misconfiguration by improving release processes with **Vault**-based secret management.
- Optimized **GCP Cloud SQL** migration processes from **2 hours to 15 minutes** by implementing CDC-based migration using **GCP DMS**.
- Transformed **400+** production-grade **AWS** resources into code-based configuration using **Terraform**, improving infrastructure visibility and operational consistency.

Release Engineer, Pegipegi, Indonesia

Mar 2020 - Oct 2021

Maintained Jenkins pipelines and internal tools on Kubernetes, serving **100+** backend service pipelines.

- Transformed **80%+** of redundant Jenkins pipeline files into a single standardized deployment pipeline.
- Reduced provisioning time for pipeline supporting resources by up to **6x** by migrating them onto Kubernetes.

Data Center Staff, Bina Nusantara - IT Division, Indonesia

Mar 2018 - Feb 2020

Built automation tooling for IT operations, including a QR-based event registration system and Windows AD access integration, reducing manual processes by up to 10x.

EDUCATION

Bina Nusantara University, Jakarta

2016 - 2020

Bachelor's degree in Information Systems. Final GPA: **3.8 / 4.0**

ACTIVITIES

Selected Technical Writing

Accessing GCP Secret Manager from GKE Cluster using Murmur

Apr 2024

Training & Certifications

Associate Cloud Engineer, **Google Cloud**

Jan 2023

DevOps Engineering on AWS, **AWS**

Mar 2021

LANGUAGE

Indonesian - Native · **English** - Business level
